

Sprint 3 Report

Date: 02/25/2026

Actions to Stop

- Upload a PDF/image into my folder
- See a documents list showing filename + upload timestamp.

Actions to Start

- I can attach a document to a task and see the document under that task.
- View/download an uploaded document from the UI.
- Delete a document

Actions to Continue

- Ensuring there are no unresolved errors and unused imports in files before committing to main
- Keeping secrets out of GitHub
- Regularly pulling from main before starting work to avoid merge conflicts.
- Keeping UI consistent across components

Completed Work

- **16. As a user, I can upload a PDF/image into my folder (<uid>/file).** Design file upload UI (drag & drop or button) Estimate 6 - 8 hours
 - Integrate Supabase Storage bucket setup
 - Implement file upload logic (store under <uid>/filename)
 - Store metadata in DB (filename, path, timestamp, userId)
 - File validation (type + size limits)
 - Testing (multiple uploads, wrong file type, large file)
- **17. As a user, I can see a documents list showing filename + upload timestamp.** Estimated 4 - 5 hours
 - Backend query to fetch user documents

- Create Documents List component
- Display filename + formatted timestamp
- Sort by newest upload first
- Empty state handling
- Testing (new user, many files, sorting check)

18. As a user (5 points), I can attach a document to a task and see the document under that task. Estimated: 6–8 hours

- Update DB schema (add taskId relation to documents or junction table)
- Create Supabase migration + RLS policies
- Add document selector in Task form (React + Vite)
- Query documents by taskId in Task Detail view
- Display attached documents (filename + timestamp)

19. As a user (3 points), I can view/download an uploaded document from the UI.

Estimated: 3–4 hours

- Add View / Download buttons in Documents List and Task view
- Generate signed URL from Supabase Storage
- Open file in new tab or trigger download
- Handle permission errors (RLS)
- Style actions with Tailwind CSS
- Test preview + download flows

20. As a user (2 points), I can delete a document. Estimated 2-3 hours

- Add Delete button with confirmation modal
- Remove file from Supabase Storage
- Delete metadata record from DB
- Update UI state after deletion
- Enforce RLS (owner-only delete)
- Test deletion + unauthorized attempt

INFRASTRUCTURE:

- N/A

Incomplete Work

18-20 user stories are still in progress. We hope to complete them soon.

Final Burnup Chart
