

Life Admin Manager Developed by **Life Admin Manager Team**

Sprint 4 Report

Date: 03/10/2026

Actions to Stop

- I can attach a document to a task and see the document under that task.
- View/download an uploaded document from the UI.
- Delete a document
- Ensuring there are no unresolved errors and unused imports in files before committing to main
- - Keeping secrets out of GitHub
- - Regularly pulling from main before starting work to avoid merge conflicts.
- - Keeping UI consistent across components

Actions to Start

None

Actions to Continue

None

Completed Work

- **21. As a user, after uploading a document, I receive an AI-suggested deadline and title based on extracted text.** Estimate 4 - 6 hours
 - Store file into supabase database
 - Add a new entry into the database table with the file path
 - User is redirected to the extraction preview page
 - Suggestions regarding task information are given via OpenAI API (gpt-4o-mini)
- **22. As a user, I can confirm/edit the AI-extracted deadline before saving it.** Estimated 6 - 8 hours
 - Frontend component with prefilled input boxes

- A form that allows editing the AI-extracted deadline and info
- Submit button that sends information to the database
- Supabase query to store the fetched/edited deadline

23. As a user , once a due date exists, the app auto-creates reminders for 7 days before and 1 day before. Estimated: 6 - 8 hours

- When a user creates a new task, schedule a resend email with the task information
- Create a notification database entry with the user email, task name, and reminder date
- Create a database trigger to auto-generate reminders when a task's due date is set
- Test implementation to ensure proper functionality

24. As a user, I receive email reminders when the reminder time is reached.

Estimated: 3-4 hours

- Create email template with task details (title, due date, category, priority)
- Create notification database entry (user email, task name, reminder date)
- Add a function to send a task creation confirmation email
- Add email templating and styling
- Test email sending and notification creation workflow

25. As a user, I can view reminder status (Scheduled/Sent) for tasks. Estimated 4-6 hours

- Add reminder_status enum column to the reminders table (scheduled/sent/failed)
- Display reminder status badges in RemindersPage
- Show reminder indicators on TasksPage and TaskDetails
- Add a reminder history/message log viewer for each task
- Add timestamp display for the last triggered reminder

INFRASTRUCTURE:

- N/A

Incomplete Work

None. All functionalities complete.

Final Burnup Chart
